```csharp
public interface IReportStrategy
{
    void GenerateReport(string data);
}
```

```csharp
public class PdfReportStrategy : IReportStrategy
{
    public void GenerateReport(string data)
    {
        Console.WriteLine("Generating PDF Report with data: " + data);
    }
}

public class ExcelReportStrategy : IReportStrategy
{
    public void GenerateReport(string data)
    {
        Console.WriteLine("Generating Excel Report with data: " + data);
    }
}
```

```csharp
public class ReportContext
```

```csharp
{
    private IReportStrategy _reportStrategy;

    public ReportContext(IReportStrategy reportStrategy)
    {
        _reportStrategy = reportStrategy;
    }

    public void SetStrategy(IReportStrategy reportStrategy)
    {
        _reportStrategy = reportStrategy;
    }

    public void CreateReport(string data)
    {
        _reportStrategy.GenerateReport(data);
    }
}
```

```csharp
class Program
{
    static void Main()
    {
        var context = new ReportContext(new PdfReportStrategy());
        context.CreateReport("Report Data 1");
```

```
        context.SetStrategy(new ExcelReportStrategy());

        context.CreateReport("Report Data 2");
    }
}
```
